

0008 MODULES of Node.js Basic

Monday, 26 June 2023

10:43 AM

Module:-

- A module is an encapsulated & reusable chunk of code that has its own context. [one type of reusable library functions in c/c++/java etc..]
- In Node.js, Each file is treated as a separate module.
- There are three types of modules in Node.js.

1. Local modules:- Modules that we create in our application.
2. Built-in-modules:- Modules that Node.js ships with, out of the box. i.e. with installation package of Node.js.
3. Third Party Modules:- Modules written by other developers that we can use in our application.
