

Install Node.js

In this section, you will learn about the tools required and steps to setup development environment to develop a Node.js application.

Node.js development environment can be setup in Windows, Mac, Linux and Solaris. The following tools/SDK are required for developing a Node.js application on any platform.

1. Node.js
2. Node Package Manager (NPM)
3. IDE (Integrated Development Environment) or TextEditor

NPM (Node Package Manager) is included in Node.js installation since Node version 0.6.0., so there is no need to install it separately.

Install Node.js on Windows

Visit Node.js official web site <https://nodejs.org>. It will automatically detect OS and display download link as per your Operating System. For example, it will display following download link for 64 bit Windows OS.

Download Node.JS Installer for Windows

Download the installer for windows by clicking on LTS or Current version button. Here, we will install the latest version LTS for windows that has long time support. However, you can also install the Current version which will have the latest features.

After you download the MSI, double-click on it to start the installation as shown below.

Node.js Installation

Click Next to read and accept the License Agreement and then click Install. It will install Node.js quickly on your computer. Finally, click finish to complete the installation.

Verify Installation

Once you install Node.js on your computer, you can verify it by opening the command prompt and typing `node -v`. If Node.js is installed successfully then it will display the version of the Node.js installed on your machine, as shown below.

Verify Node.js Installation

Install Node.js on Mac/Linux

Visit Node.js official web site <https://nodejs.org/en/download> page. Click on the appropriate installer for Mac (.pkg or .tar.gz) or Linux to download the Node.js installer.

Downloads

Latest LTS Version: 14.18.0 (includes npm 6.14.15)

Download the Node.js source code or a pre-built installer for your platform, and start developing today.

Current
Latest Features

Windows Installer
node-v14.18.0-x64.msi

macOS Installer
node-v14.18.0.pkg

Source Code
node-v14.18.0.tar.gz

Windows Installer (.msi)	32-bit	64-bit
Windows Binary (.zip)	32-bit	64-bit
macOS Installer (.pkg)	64-bit	
macOS Binary (.tar.gz)	64-bit	
Linux Binaries (x64)	64-bit	
Linux Binaries (ARM)	ARMv7	ARMv8
Source Code	node-v14.18.0.tar.gz	

Node Environment Setup

Once downloaded, click on the installer to start the Node.js installation wizard. Click on **Continue** and follow the steps. After successful installation, it will display summary of installation about the location where it installed Node.js and NPM.

Node.js Installation on OS X

After installation, verify the Node.js installation using terminal window and enter the following command. It will display the version number of Node.js installed on your Mac.

```
$ node -v
```

Optionally, for Mac or Linux users, you can directly install Node.js from the command line using Homebrew package manager for Mac OS or Linuxbrew package manager for Linux Operating System. For Linux, you will need to install additional dependencies, viz. Ruby version 1.8.6 or higher and GCC version 4.2 or higher before installing node.

```
$ brew install node
```
