Courses

Practice

The **fs.stat()** method is used to return information about the given file or directory. It returns an fs.Stat object which has several properties and methods to get details about the file or directory.

Syntax:

```
fs.stat( 1path, 2options, 3callback )
```

Parameters: This method accept three parameters as mentioned above and described below:

- **path:** It holds the path of the file or directory that has to be checked. It can be a String, Buffer or URL.

2: options - It is an object that can be used to specify optional parameters that will affect the o/p. It has one optional parameter:

2.2 • **bigint:** It is a boolean value which specifies if the numeric values returned in the fs.Stats object are bigint. The default value is false. } yes :- bigint type
no :- Not bigint type.

- **callback:** It is the function that would be called when the method is executed.
- **err:** It is an error that would be thrown if the method
- **stats:** It is the Stats object that contains the details of the file path.

Below examples illustrate the **fs.stat()** method in Node.js:

Example 1: This example uses **fs.stat()** method to get the details of the path.

```
// Node.js program to demonstrate the
// fs.stat() method

// Import the filesystem module
const fs = require('fs');

// Getting information for a file
fs.stat("example_file.txt", (error, stats) => {
  if (error) {
    console.log(error);
  }
  else {
    console.log("Stats object for: example_file.txt");
    console.log(stats);

    // Using methods of the Stats object
    console.log("Path is file:", stats.isFile());
    console.log("Path is directory:", stats.isDirectory());
  }
});

// Getting information for a directory
fs.stat("example_directory.txt", (error, stats) => {
  if (error) {
    console.log(error);
  }
  else {
    console.log("Stats object for: example_directory.txt");
    console.log(stats);

    // Using methods of the Stats object
    console.log("Path is file:", stats.isFile());
    console.log("Path is directory:", stats.isDirectory());
  }
});
```

Output:

```
Stats object for: example_file.txt
Stats {
```

```

Example 2: This example uses **fs.stat()** method to get the details of files with the bigint option.

```
// Node.js program to demonstrate the  
// fs.stat() method
```

```
// Import the filesystem module  
const fs = require('fs');
```

```
fs.stat("example_file.txt", (error, stats) => {  
    console.log(stats);  
});
```

```
// Using the bigint option to return  
// the values in big integer format
```

```
fs.stat("example_file.txt", { bigint: true }, (error, stats) => {  
    console.log(stats);  
});
```

Output:

```
Stats {  
  dev: 2269,  
  mode: 33188,  
  nlink: 1,  
  uid: 1000,  
  gid: 1000,
